

Application

The Hyjet HHR Series is designed for residential use, offering a seamless rainwater harvesting solution. It prioritizes tank water for water supply, automatically switching to mains water when the tank is empty or during power outages. Ideal for single and double-story homes, it supports up to four outlets, typically toilets and laundry systems. The system is certified for drinking water contact, ensuring safe water use in households.

Specification

Pump body: AISI 304 Stainless steel

Impeller: Stainless steel

Motor shaft: Stainless steel

Mechanical seal: Ceramic / graphite / NBR

Features and benefits

Electronic Controller with run dry protection

No in-tank float switch

Quick & easy to install
